

| Single Side/Walls

For the protection of all types of structures, in particular for sports hall walls, fences and wall bars, etc.

Outer cover is made of highly resistant, polyester canvas that is PVC coated on both sides. Double-stitched throughout. Features a zip on the inside to enable the foam to be replaced and is fastened by means of a gusset and Velcro. Cover available in one colour.

Various densities are available, depending on the thickness, or as required by the client:

D-20, D-25, LD-15, etc.

Nos adaptamos a cualquier tipo de forma y dimensión.

We can adapt the product to any shape and size.

For the protection of all types of structures, such as pillars.

Outer cover is made of highly resistant, polyester canvas that is PVC coated on both sides. Double-stitched throughout. Features a zip on the inside to enable the foam to be replaced and is fastened by means of a gusset and Velcro. Cover available in one colour.

Various densities are available, depending on thickness or client requirements:

D-20, D-25, LD-15, etc.

4 Sides

For the protection of all types of structures, such as pillars. Outer cover is made of highly resistant, polyester canvas that is PVC coated on both sides. Double-stitched throughout. Features a zip on the inside to enable the foam to be replaced and is fastened by means of a flap and Velcro.

Cover available in one colour.

Various densities are available, depending on thickness or client requirements: D-20, D-25, LD-15, etc.

We can adapt the product to any shape and size.

| Cylindrical

For the protection of columns and pylons, etc.

Outer cover is made of highly resistant, polyester canvas that is PVC coated on both sides. Double-stitched throughout. Fastened by means of a flap with Velcro, flap with eyelets and rubber straps, or alternative system agreed with the client. Cover available in one colour.

Various densities are available, depending on the thickness or as per client requirements:

As standard, we use TS-10, filling, manufactured by Toldos Serrano, which is made with reticulated polyethylene in 4 cm layers, depending on impact resistance, water-repellent and anti-parasitic.

Other fillings: D-20 and D-25.

Nos adaptamos a cualquier tipo de forma y dimensión.

We can adapt the product to any shape and size.

Sandwich

For the protection of large elements, pylons, tree trunks, transmission towers or lighting structures, etc.

Outer cover is made of highly durable, polyester canvas that is PVC coated on both sides. "Sandwich" - type soldering points with canvas flaps and PVC eyelets. Cover available in one colour.

As standard we use TS-10 filling, manufactured by Tol-dos Serrano, which is made with reticulated polyethylene in 4 cm layers, depending on impact resistance, water-repellent and anti-parasitic.

TatamSport

Where a specially developed product is required, we use a computer design programme to produce the best solution.

Todas las protecciones especiales o susceptibles de dificultad, se desarrollan con anterioridad mediante programa de diseño informático en donde se estudia la solución de protección adecuada.

All special or may impede protection, developed before using design software where study the solution to adopt.
